

Preliminary Pitch

CycleSIGHT

Because pain isn't one-size-fits-all.

Q1

February

2026

Aiyana Sharpe, Farruh Turgunov, Gloria Jackson

- **Start out with scenario(2 diff types of pt's)**
- **The go into statistics/ problems/ solution to problem**

PROBLEM

Kidney disease is the 8th leading cause of death in the US, followed by liver disease.

*The CDC, 2023

The Solution: CycleSIGHT

Because pain isn't one-size-fits-all.

CycleSIGHT transforms chronic pelvic pain management into safe, targeted **precision medicine for just \$200.**

By analyzing genetic markers for drug metabolism, pain sensitivity, and endometriosis risk, we empower clinicians to select the right treatment immediately—protecting patient organ health while drastically reducing the costs of delayed diagnosis.

Genetic Variants of Interest

Drug Metabolism

SNPs rs1799853 & rs1057910 in the CYP2C9 gene on chromosome 10

Associated Effect:
Decreased/Nonexistent NSAID metabolism

Pain Sensitivity

SNP rs4680 in the COMT gene on chromosome 22→Increased pain perception

SNP rs20417 in the PTGS2 (COX-2) gene on chromosome 1→Decreased NSAID efficacy

Endometriosis Risk

SNP rs17562 in the ILA1 gene on chromosome 2

SNP rs7521902 in the WNT4 gene on chromosome 1

Associated Effect: Increased endometriosis susceptibility

The CycleSIGHT Journey

Patient Consultation →

Patient presents at PCP or health clinic with symptoms such as:

- Severe dysmenorrhea
- Suspected endometriosis
- Issues with standard NSAID/hormonal therapy

Test Ordered →

Clinician orders CycleSIGHT test.

The kit is shipped to the patient's home.

Collect Sample →

Patient provides a **saliva sample** via a painless buccal swab and mails it back to the lab.

Molecular Analysis →

The patient's saliva sample is analyzed at our CLIA-certified lab using **qPCR TaqMan assay technology** to identify targeted SNP genotypes for 6 key markers in the *CYP2C9*, *COMT*, *PTGS2*, *IL1A*, and *WNT4* genes

A report is generated and sent to the clinician.

Personalized Care

The clinician uses the report to guide treatment such as switching from NSAIDs to alternative analgesic methods, adjusting NSAID dosage, and/or expediting specialized imaging for endometriosis.

Genetic Profile (SNP)	Finding	Possible Clinical Interpretation from CycleSIGHT Report
CYP2C9 (rs1799853/rs1057910)	*2 or *3 Allele	"NSAID Metabolism Issue." Patient is a slow/poor metabolizer. High risk of toxicity with standard NSAID doses.
COMT (rs4680)	Met/Met Genotype	"High Pain Sensitivity." Patient requires stronger pain management interventions; low tolerance for discomfort.
PTGS2 (rs20417)	C/C Genotype	"Low NSAID Efficacy." Patient naturally produces fewer prostaglandins via COX-2. NSAIDs are unlikely to provide significant relief.
IL1A/WNT4 (rs17561/rs7521902)	Risk Variants Present	"High Endometriosis Risk." Strongly supports early diagnostic imaging (MRI/Ultrasound) to reduce diagnostic delay.

Meet the team

Farruh Turgunov

CFO

Directs financial strategy, market analysis, and venture positioning to ensure long-term sustainability

Gloria Jackson

CEO

Drives the development of personalized diagnostic tools by bridging clinical workflow insights with advanced genomic research

Aiyana Sharpe

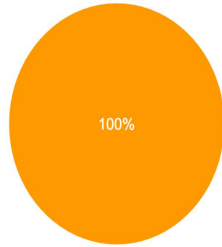

CTO

Bridges genomic rigor with clinical workflow, leading technical development and assay design for a scalable, provider-friendly platform

Some Customer Discovery Stats So Far...

Do you think CycleSIGHT fills a unique gap in the healthcare market?

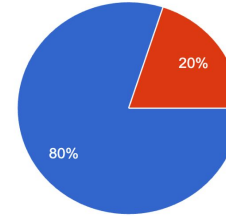

9 responses

- Not at all
- To a small extent
- To a large extent

Would knowing whether your body metabolizes (breaks down) certain medications differently influence your willingness to try or avoid them?

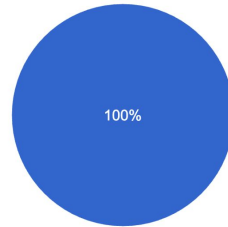

15 responses

- Yes
- No

Would you be interested in our product if we offered an Early Adopters Program, where the first 2,500 customers receive \$100 off the regular \$200 price?

6 responses

- Yes
- No
- Other

Customer Discovery Plan: who will pay for this and why?

To Gain Early Traction/ Support:
Early Adoption Program
Offer \$100 cash-pay price for first 2500 patients.

Understand what is required for a new CPT(Current Procedural Terminology) code
Gauge the **willingness to pay** for uninsured individuals

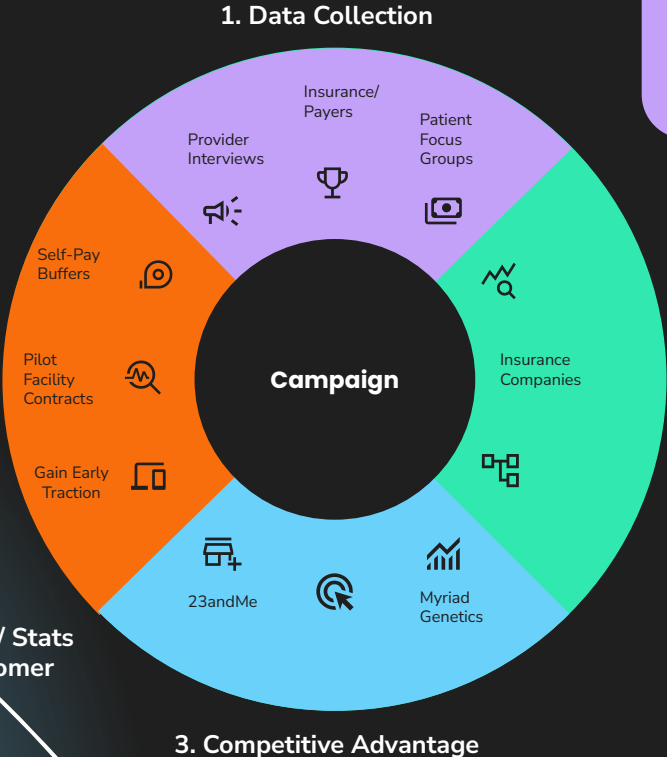

5. Revenue and Implementation Strategy

2. Identify Primary Customer

ICD-10 Code Analysis

What specific evidence is needed to move our test from “investigational” top “Covered”

Does our service ultimately help attract more contacts with large employers?

Ask customers why would they use our service over other competitors?
CycleSIGHT offers specialized integration(genetic markers combined with clinical symptoms)
qPCR : high precision/ low cost for only 6 SNPs

Customer Discovery takeaways

- CycleSIGHT meets a unique need in this market
- Insurance companies are our primary customer
- CPT & ICD code analysis for medical insurance claim coverage
- Incentive for first 2500 customers

What were the estimates?

- TAM:
 - All Menstruating Individuals
~\$570.4 Billion
- SAM
 - Region Specific, a.k.a USA
~\$21.39 Billion
- SOM
 - Assuming we can service 375k women per year (0.25%):
~\$75m per year.

Timeline

WE'RE HERE

January

February

March

April

May

June

July

First 3 Months

Formalize Company Structure

In this stage, we will go through hiring processes as well as begin outreach attempts to get our company known and exposed to some clinicians and to the public

The Next 4-8 Months

R&D Development

In this stage, we will go through the process of setting up our panel in the process, ensure that said process works and is reliably repeatable

Next 6-12 Months

Finalization Steps

In this stage, we will finalize the workflow, rigorously hire new employees, and being pursuing a CLIA certification.

1 Year from now

Refinement

In this stage, we will go through more outreach and launch an initial clinical pilot program in attempts to get our company known and exposed to some clinicians and to the public

2 Years from now

Increase Scale

In this stage, we will have established everything we need to increase scale, look to establish new lab locations and even license out the process

A white, curved, abstract line starts from the top left corner and extends diagonally towards the center of the slide.

Thank you!

CycleSIGHT

Because pain isn't one-size-fits-all.
